DeepSeek-V4.1-Flash: Smarter, Faster, More Efficient

Introducing DeepSeek-V4.1-Flash: smarter, faster, more efficient.

Introducing the smallest model in our new architecture family, with native visual understanding.

Designed for greater capability, faster inference, higher throughput, and scaling to larger models.

Asymmetric architecture. More intelligence, less cost.

552B-parameter MoE.

New Causal Encoder–Decoder architecture: just 8B active parameters for input, 16B for output.

New pre-training methods + larger-scale RL post-training deliver benchmark results ahead of flagship models, including DeepSeek-V4-Pro.

Benchmarks	DeepSeek V4.1-Flash	DeepSeek V4-Pro 0813	DeepSeek V4-Flash 0731	GLM 5.3	Kimi K3	GPT 5.6-Sol	Claude Opus 5
GPQA Diamond	90.9	92.4	89.9	88.1	92.9	94.1	93.4
HLE	36.8(39.1*)	42.7*	37.8*	42.0*	43.5	44.5	56.3
Codeforces (Rating)	3471	3348	3289	-	-	-	-
MathAreana Apex	65.6	65.3	58.6	-	65.6	-	-
Terminal-Bench 2.1	90.6	87.9	82.7	88.2	88.3	88.8	89.1
Terminal-Bench 3.0	30.0	11.8	7.6	28.3	17.7	34.4	43.3
Terminal-Bench 4.0	31.2	12.4	7.0	37.9	12.6	39.9	51.8
DeepSWE v1.1	74.2	62.7	54.4	66.9	67.5	73.0	74.0
ProgramBench	20.3	15.5	-	19.0	17.5	23.0	37.0
NL2Repo-Bench	65.4	61.5	54.2	58.0	58.0	56.8	75.3
CyberGym	88.1	83.3	76.7	84.5	80.0	84.5	-
SEC-Bench Pro	62.8	56.4	30.9	-	-	74.3	-
ExploitGym	15.3	5.4	1.8	15.0	-	33.7	22.1
HLE (w/tools)	63.9	60.0	51.5	62.5	59.8	-	63.6
Automation-Bench	54.8	43.2	37.7	48.8	46.7	45.8	50.3
Agents' Last Exam	31.8	25.7	25.2	28.5	27.6	26.7	28.6
Chartography(w/tools)	78.9	-	-	-	68.1	79.9	84.0
BabyVision (w/tools)	89.6	-	-	-	85.7	88.9	94.1
ZeroBench-main (w/tools)	49.0	-	-	-	41.0	53.0	52.0

* Denotes text-only subset of HLE.

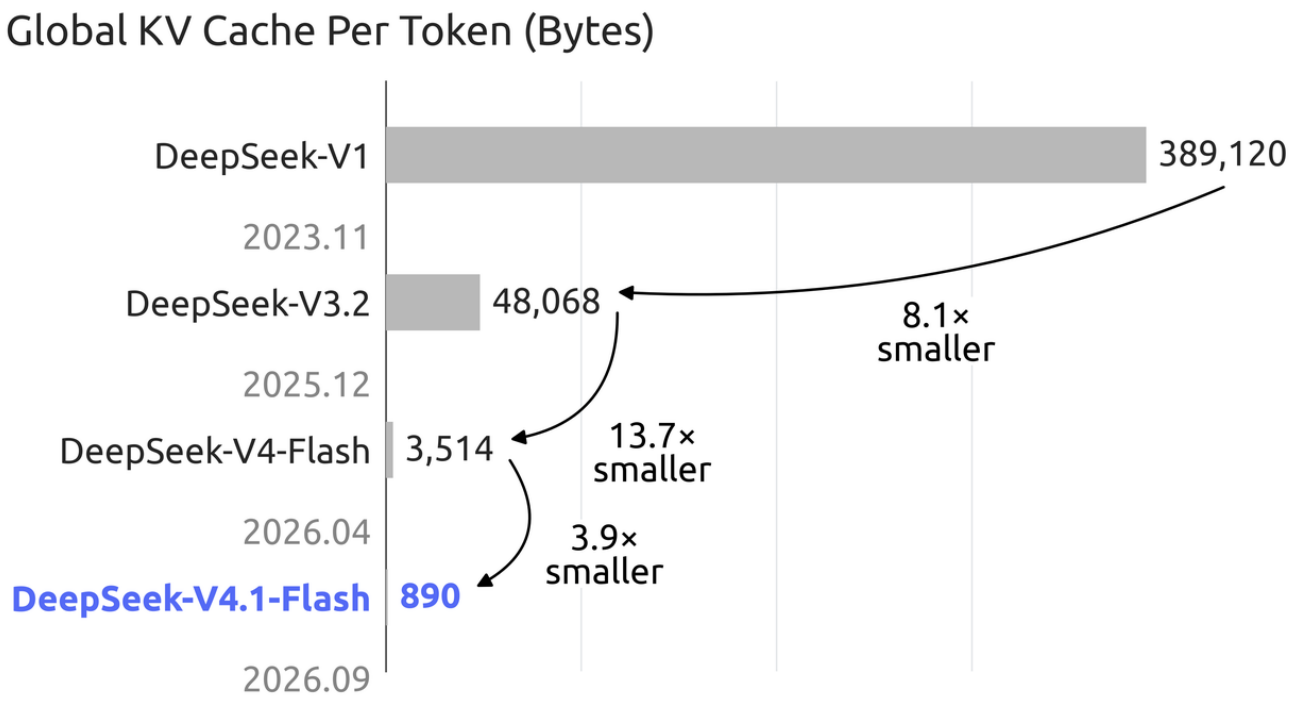

Smaller KV cache. Bigger savings.

Compared with the previous generation, V4.1-Flash's KV cache needs just:

1/4 the HBM

1/8 the SSD storage

Cache-hit charges often account for a large share of agent costs. Compressing the cache cuts those costs significantly.

⚡ V4.1-Flash is now live on the DeepSeek API with native multimodal support.

Set your model to `deepseek-flash`.

V4-Flash & V4-Flash-Vision-Exp are retired. For compatibility, `deepseek-v4-flash` and `deepseek-v4-flash-vision-exp` temporarily route to V4.1-Flash.

Tests by multiple parties put V4.1-Flash ahead of V4-Pro on performance, cost, speed & total runtime. We're phasing out V4-Pro.

Starting at 04:00 UTC on Sept 14, 2026, all `deepseek-v4-pro` requests will route to V4.1-Flash at V4.1-Flash rates. This will continue until V4.1-Pro launches.

Official partners WorkBuddy (including CodeBuddy) & OpenCode now fully support V4.1-Flash. Try it today!

💰 More efficient architecture. Lower API prices.

V4.1-Flash lets us serve more users at a lower cost. We're passing the savings on to you.

Peak/off-peak pricing continues to balance demand.

Off-peak rates are 50% of peak rates. Schedule flexible workloads off-peak to save.

New pricing takes effect at 04:00 UTC on Sept 10, 2026.

DeepSeek-V4.1-Flash API Pricing

	Input (cache hit)	Input (cache miss)	Output
Off-Peak	$ 0.003	$ 0.15	$ 0.6
Peak hours	$ 0.006	$ 0.3	$ 1.2

Peak hours: 01:00–04:00 and 06:00–10:00 UTC on weekdays (all other times are off-peak, including weekends and public holidays)

Effective from: 04:00 UTC, September 10, 2026

deepseek

🌐 Supporting open source. Expanding deployment options.

We'll work closely with the open-source community on V4.1-Flash inference support and explore more deployment options.

Planning a large-scale deployment with 2,000 GPUs + a storage cluster? Let's talk.

Model: https://huggingface.co/deepseek-ai/DeepSeek-V4.1-Flash

Paper: https://huggingface.co/deepseek-ai/DeepSeek-V4.1-Flash/blob/main/DeepSeek_V41_Tech_Report.pdf

- Asymmetric architecture. More intelligence, less cost.
- Smaller KV cache. Bigger savings.
- ⚡ V4.1-Flash is now live on the DeepSeek API with native multimodal support.
- 💰 More efficient architecture. Lower API prices.
- 🌐 Supporting open source. Expanding deployment options.
